- **Product not intended for pulling or pushing**

Tools Required
17mm Wrench
(2) 9/16" Wrench
13mm Wrench
10mm Socket & Ratchet
T27 Torx bit

**Step 1:** Place vehicle on flat and level surface. Place gear selector in park and remove keys from the ignition.

**Step 2:** Remove front forward upper a-arm nut and install L-brackets securing with supplied nut. Be sure to leave loose at this time.

**(See Figure A & B)**

**Step 3:** Remove two factory front lower screws that retain stock plastic. (See Figure C)

**Step 4:** Install bumper by aligning upper tabs with L-brackets, secure with supplied hardware. Then secure lower bumper tubes with supplied hardware utilizing holes where screws from (Step 3) were previously removed. (See Figure D & E)

**Step 5:** Go through and tighten all hardware (you can reference service manual for torque specs). When all hardware is secure insert tube end caps by pressing into place. (See Figure F)

\*Pro Tip: Be sure to check all hardware is secure prior to each ride.
